1. Vorbemerkungen

In der aktuellen 2. Fassung der Waldgefäßpflanzenliste hat sich die Gesamtzahl der enthaltenen Taxa gegenüber der Erstauflage (SCHMIDT et al. 2003) nur geringfügig verändert. Die Erstauflage umfasste 1.213, die aktuelle Fassung 1.216 Sippen. Neu hinzugekommen sind *Aesculus hippocastanum*, *Alopecurus pratensis*, *Betula nana*, *Carex chordorrhiza*, *C. dioica*, *C. hartmannii*, *Cladium mariscus*, *Phytolacca americana*, *Pinus strobus*, *Salix myrtilloides* und *Tephrosia helenitis*. Von der Liste genommen wurde lediglich *Acinos arvensis*. Eine Reihe von Sippen, die sich hinsichtlich ihrer Waldbindung nicht unterschieden, wurden auf höherem taxonomischen Niveau zusammengefasst. Dies betrifft *Alchemilla alpigena*, *A. effusa*, *A. hoppeana*, *A. micans* und *A. xanthochlora* (*A. vulgaris* agg.), *Melampyrum pratense* s. *commutatum* und *M. pratense* s. *pratense* (*M. pratense*), *Polygala amara* und *P. amarella* (*P. amara* agg.) sowie *Urtica dioica* s. *dioica* und *U. dioica* s. *galeopsifolia* (*U. dioica*). Durch eine verbesserte Datengrundlage (floristische Datenbank des Bundesamtes für Naturschutz) gab es zahlreiche Veränderungen bei der Zuordnung der Taxa zu den naturräumlichen Großregionen. Diese Veränderungen wie auch die gegenüber der der Erstauflage veränderten Einstufungen können hier nicht im Einzelnen aufgeführt werden. Neu ist auch die Zuordnung der Bäume zu Waldbindungskategorien sowie die Bildung einer eigenen Gruppe für die Epiphyten.

Bei folgenden, in der Standardliste nicht geführten Gefäßpflanzen-Sippen folgt die Benennung nicht WISSKIRCHEN & HAEUPLER (1998), sondern JÄGER & WERNER (2005): *Euphorbia angulata* Jacq., *Pinus strobus* L., *Rhododendron x intermedium* und *Schoenus x intermedius* Celak.

Die methodischen Grundlagen sind ausführlich bei SCHMIDT et al. (2011) dargestellt.

2. Erläuterung der Felder und Zeichen

Für alle in der Waldartenliste der Farn- und Blütenpflanzen Deutschlands (Tab. 2) enthaltenen Taxa sind, wenn verfügbar, folgende Informationen angegeben: Waldbindung (im Norddeutschen Tiefland, im Hügel- und Bergland, in den Alpen, in Deutschland), Zeigerwerte (Lichtzahl, Temperaturzahl, Konti-

mentalitätszahl, Feuchtezahl, Reaktionszahl und Stickstoffzahl) nach ELLENBERG et al. (2001), floristischer Status in Deutschland nach WISSKIRCHEN & HAEUPLER (1998) sowie eine eindeutige Taxonym-Nummer in der Referenzliste GermanSL (JANSEN & DENGLER 2008). Die Angabe der Zeigerwerte erfolgt ohne Zusätze und weitere Differenzierungen, wie sie ELLENBERG et al. (2001) vornehmen. Ist kein Zeigerwert angegeben, so bedeutet dies, dass entweder kein Wert vorliegt oder die Art hinsichtlich des ökologischen Faktors von ELLENBERG et al. (2001) als indifferent eingestuft wird. Eine Erläuterung der Felder und der in ihnen enthaltenen Abkürzungen und Zeichen ist in Tab. 1 zu finden.
